Readme File:

1. The pre-installed software for the web application is the Node.Js modules.
2. So to run the code have all the node modules installed using the cmd prompt,
   Change the working directory of the cmd prmt by using the cd command and install the Express module using the command -> npm install express
3. To run the chat application navigate into the space where the files are stored using the command prompt and use the command -> node app.
4. The application will run at localhost port 3000, so type in localhost:3000 in your browser to see the application running.
5. The HTML/CSS files are run on the Xampp apache web server. To run this I have the xampp installed and all the files are being copied to the C:\xampp\htdocs location. Now the default port for the apache web server when it is running is 80. So type in localhost:80/index-main.html to run the HTML/CSS files.
